```

Disclosure; Page 14; 129pp; English

The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polynuclectides encoding different immunoglobulin binding protein (IBBP) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transferted cells, to generate an IBBP that thinds to a ligand, and transferted plant cells are selected, and preparing an IBBP array in plant cells. At least one peptide sequence has at least 75% sequence identity to a framework region (FR) of a native IBW, IgG, IgA, IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin protein array, preferably heavy chain binding protein (CHBP) array in eukaryotic cells especially plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic cells (e.g. Agrobacterium tumefaciens or maize) cor other eukaryotic cells (e.g. Agrobacterium seasys of IBBPs having desired characteristics. The present sequence is a mammalian IBBP of immunoglobulin derived peptide that may be incorporated into an IBBP of invention.

New bispecific antibodies having antigen-binding sites specific for first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for treating tumors -

```
Claim 6; Page 48; 98pp; English.

XX
CC
The invention relates to a novel antibody having a first antigen binding
CC site specific for a first vascular endothelial growth factor (VEGF)
CC receptor and a second antigen-binding site specific for a second VEGF
CC receptor. The bispecific antigen-binding proteins block activation of the
CC vEGF receptor and are useful for reducing or inhibiting VEGF-induced
CC cellular functions such as mitogenesis of vascular endothelial cells
CC and migration of leukaemia cells. The antibodies are useful for treating
CC uncours and for in vivo or in vitro for investigative and diagnostic.
CC methods. This sequence represents a mouse peptide relating to the
CC bispecific antibodies that bind to the VEGF receptors of the invention.
